FATIMA ABUSHAERA

Front-End Developer | React & Next.js

+972 592-141-499 | f2482005@gmail.com | LinkedIn | GitHub

Gaza, Palestine

PROFESSIONAL SUMMARY

Motivated Front-End Developer and Software Engineering student at Al-Azhar University of Gaza with hands-on experience in building responsive and user-friendly web applications. Skilled in HTML, CSS, JavaScript, React, Next.js, and Tailwind CSS, with experience integrating REST APIs using Axios. Familiar with PHP, MySQL, and relational database design. Passionate about creating accessible, maintainable, and modern web interfaces while continuously improving technical skills and problem-solving abilities.

TECHNICAL SKILLS

Programming Languages: JavaScript, Java, C++, PHP
Front-End Development: HTML5, CSS3, React, Next.js, Tailwind CSS, Responsive Web Design
API Integration: REST APIs, Axios, HTTP Requests, JSON
Back-End Development: PHP, User Authentication, CRUD Operations
Database Management: MySQL, SQL Queries, Relational Database Design, PDO
Tools and Workflow: Git, GitHub, VS Code, Figma, XAMPP, Chrome DevTools

PROJECTS

Pay Per View – Creator Campaign Platform

Live Demo | GitHub Repository

Multilingual Web Application for Creators

- Developed a multilingual web application using Next.js, React, and Tailwind CSS, with locale-based routing and internationalization handled through next-intl.
- Built a creator “Start a Project” flow covering campaign listings, a clip submission form, and link validation with clear error states.
- Implemented dynamic result screens (AI approved, rejected with required fixes, and manual review) rendered based on API responses.
- Structured the codebase into modular, section-based components and used react-icons, react-iconly, and lucide-react for a consistent UI.

Fatima Store – E-commerce Website

GitHub Repository

Full-Stack E-commerce Web Application

- Developed a full-stack e-commerce application using PHP, MySQL, HTML5, CSS3, and JavaScript, featuring user authentication and role-based access control.
- Implemented product listings, category filtering, shopping cart, checkout, order management, and customer profiles.
- Built an admin dashboard to manage products, users, customer orders, and contact messages.
- Designed a relational MySQL database with seven interconnected tables and used PDO for database operations.

School Golden Platform

GitHub Repository

Educational and School Management Landing Page

- Developed a responsive school landing page using HTML5 and CSS3 with a clear visual hierarchy and user-friendly layout.
- Applied custom typography, reusable interface patterns, and structured page sections to maintain consistent styling.
- Focused on responsive layouts, cross-browser compatibility, and a consistent user experience.

Simple Calculator GitHub Repository
Interactive Web-Based Calculator

- Built a functional calculator using HTML5, CSS3, and vanilla JavaScript.
- Implemented mathematical operations, user input handling, and basic error handling.
- Separated structure, styling, and application logic into individual files.

EDUCATION

Al-Azhar University of Gaza 2023 – 2028
Bachelor's Degree in Software Engineering Gaza, Palestine

Relevant Coursework: Web Development, Software Design Patterns, SOLID Principles, Agile Methodologies, Data Structures, Algorithms, Database Systems
